HATCHERY PRODUCTION

Commercial hatcheries in the United States produced a total of 3,207 million broiler-type chicks during the period January - December 1973. This is a decrease of 2 percent from the 1972 production of 3,267 million broiler chicks. The hatch of broiler chicks was below the previous year in 7 of the 10 major States. The 1973 hatch in Arkansas, at 550 million, was nearly 28 million below 1972, while in Georgia the broiler hatch was down about 13 million, to 442 million chicks. In Alabama, the 1973 hatch was 438 million, down 13.5 million from 1972 and in North Carolina it was down 17.4 million to 320 million chicks.

Changes in other leading States were: Mississippi, down 18.8 million; Maryland, up 3.7 million; Texas, down 7.6 million; Delaware, up 10.0 million; California, down .6 million; and Virginia, up 1.4 million.

Production of egg-type chicks in 1973 totaled 534 million--up 9 percent from the 1972 hatch of 491 million. Among the five leading States, California, Georgia, Florida, Indiana and Arkansas, largest increases occurred in Georgia and Arkansas -- up 8.5 and 3.6 million respectively. Other large producing States having sizeable increases were: New York, 3.6 million; Minnesota, 3.0 million; Missouri, 2.3 million, and Alabama, 2.0 million.

Commercial turkey hatcheries produced 146 million poults during 1973, an increase of 3 percent from the 1972 hatch of 142 million. In 7 of the 10 leading States, poult production was above 1972. In Minnesota, poult hatchery production in 1973 was 2.4 million above the previous year at 29.7 million but production in California was down from 20.5 million in 1972 to 20.1 million in 1973.
